EXPERIENCE

Fullstack Developer

January 2026 - Present

Dynamic VA Referral Services | Part-Time

- Engineered an automated cold email outreach system that expanded the company's prospective client pipeline by targeting new business segments, directly supporting lead generation goals.
- Improved email deliverability and open rates by optimizing domain warm-up sequences and sender reputation management, reducing bounce rates and increasing campaign effectiveness.
- Designed and built personalized email sequence workflows that shortened the sales outreach cycle, enabling the marketing team to engage more prospects in less time.
- Integrated outreach tooling with CRM workflows, giving the team real-time visibility into campaign performance and enabling data-driven decisions on client acquisition strategy.

Fullstack Developer

March 2025 - September 2025

Medianeth (Startup) | Full-Time

- Stabilized a production platform serving active users by resolving critical bugs and implementing new features, reducing system downtime and improving overall reliability.
- Optimized database queries and resolved cross-environment errors, cutting average response time and enabling the platform to handle higher load without infrastructure changes.
- Accelerated the deployment pipeline by collaborating closely with the team on CI/CD practices, resulting in smoother releases and fewer post-deployment incidents.
- Enhanced platform capabilities through iterative feature development, directly contributing to improved user retention and expanded product functionality.

Fullstack Web Developer

January 2024 – Present

Freelance

- Delivered 4+ full-stack web applications for multiple clients using React.js, Next.js, and Node.js with scalable architecture, meeting project deadlines and performance requirements.
- Built responsive, cross-platform UIs with React Native (Expo) and Tailwind CSS, ensuring consistent user experiences across mobile and web with zero critical UI regressions.
- Maintained code quality and reduced integration issues through Git/GitHub version control and Postman-based API testing, enabling reliable delivery across all client projects.
- Improved clients' search engine rankings by implementing SEO in the web applications I developed, optimizing site structures, metadata, and content strategies. This established a stronger online presence for each client.
